

Crystal Energy®

The Original Flanagan Microcluster® Mineral Concentrate

60mL – Product Code 1700
120mL – Product Code 1750

www.flantechaustralia.com

The quality of the water we drink has a profound effect on our health and well being. It is vitally important that our drinking water be of the highest quality. It is the carrier of all nutrients to our cells and the vehicle for the elimination of all toxins.

Crystal Energy® can restructure and improve the quality of your drinking water. This unique product is the result of decades of research in fluid dynamics and a long quest to discover the secrets to living a long, healthy life. It is a catalytic liquid that reduces the surface tension of your drinking water, making it a more efficient wetting agent. The ability of water to wet foods determines its ability to assist in the assimilation of nutrients and elimination of toxins.

Crystal Energy® is the liquid form of this life changing discovery known as Microcluster Technology. The unique Microcluster colloids will restructure your water, allowing it to hydrate the cells and perform its many vital functions more effectively. Microclusters allow nutrients to be absorbed into the cells and toxins to be released from the cells.

What Exactly Are Flanagan Microclusters?

Microclusters are powerful, tiny mineral clusters that energise virtually all nutrients with which they come in contact. These clusters act as microscopic transport vehicles, delivering nutrients directly into the cells. About 5 to 10 nanometers (billionth of a meter) in diameter, they are so small that 2.4 million of them can be placed side by side on the head of a pin. Incredibly, they have an enormous surface area of about 240,000 square feet per ounce. Microclusters help to suspend nutrient particles so they can be easily absorbed into the cells.

How Do Flanagan Microclusters Work?

Microclusters have a very high zeta potential (negative electrical charge). They are small enough to easily penetrate any cell membrane in

the body. Zeta potential represents a basic law of nature. It plays a vital role in the health of all forms of plant and animal life. It is the force that maintains the discreteness of the trillions of cells that nourish body tissue. If zeta potential is low, nutrients are not as easily suspended for transportation to the cells and toxins are not as easily suspended for elimination. Microclusters, with their high zeta potential, can increase the absorption of nutrients and elimination of toxins by helping to maintain the proper polar attraction of negatively charged nutrients to the positively charged intracellular fluid. When these two electrical charges are in the appropriate balance, nutritional absorption and cellular metabolism are at optimum levels for health, energy and well being.

Crystal Energy® also reduces the surface tension of your drinking water. Tap water typically has a surface tension of 73 dynes. The water that surrounds our cells is approximately 45 dynes, therefore, the body has to work to lower the surface tension of our drinking water in order for nutrients to pass through cell walls. Crystal Energy® expedites this process by lowering the surface tension of your drinking water to approximately 59 dynes, creating a more efficient solvent and wetting agent. It is the solvent nature of a liquid that enables it to perform its functions in the living system.

The History Behind Flanagan Microclusters

It began years ago in a research laboratory where Dr. Patrick Flanagan studied ways to improve the absorption of nutrients into our cells. He was given years of research findings by Dr. Henri Coanda on the five regions of the world where people live healthy lives past 100 years. The diets in these five regions differed. The only common factor that could explain their long, healthy lives was their drinking water. It comes from melted glaciers and is physically different from the water we drink. Their water has lower surface tension, and in several ways has the same properties as the water which surrounds our cells. Also called

glacial milk, their water is known for the most publicised of these five regions as “Hunza Water.”

Dr. Flanagan wanted to create water identical to “Hunza water” so he could share this treasure with the rest of the world. Perhaps we could all live longer, healthier lives. He discovered that Hunza water had many physical properties involving its structure, surface tension, and the presence of tiny mineral colloids suspended in the water by an electrical charge known as zeta potential. After years of research, he developed a 33-step process to create a Hunza water analog formed into clusters, one of the smallest colloidal particles ever achieved.

Dr. Flanagan had finally succeeded in duplicating the unusual properties of Hunza glacial water, and could now bring its life-supporting qualities to the rest of the world. You can now drink the structur-

ed Hunza-type water that you need by adding Crystal Energy® to your pure drinking water.

Microclustered Supplements

Microclusters are combined with the most powerful Superfood nutrients available on planet earth to create a dynamic new class of nutritional supplements. Flantech formulas with Microclusters cannot be compared with any other nutritional products. They are in a class of their own!

Suggested Use: Add 8 drops to every 250ml glass of water you drink, or 1 teaspoon to 4 litres of pure water.

Contains: Flanagan Microclusters® (Purified Water, Silica, Potassium Carbonate, Magnesium Sulphate) and Safflower Oil.

This product is not intended to diagnose, treat, cure or prevent disease.
